CALIBRATION

Valid to: March 28, 2022

Certificate Number: AC-1213

Mass and Mass Related

Table with 4 columns: Parameter/Equipment, Range, Expanded Uncertainty of Measurement (+/-), Reference Standard, Method, and/or Equipment. Rows include Class I Balances, Class II Balances, Class III Scales, and Class III L Scales.

Calibration and Measurement Capability (CMC) is expressed in terms of the measurement parameter, measurement range, expanded uncertainty of measurement and reference standard, method, and/or equipment. The expanded uncertainty of measurement is expressed as the standard uncertainty of the measurement multiplied by a coverage factor of 2 (k=2), corresponding to a confidence level of approximately 95%.

Notes:

1. On-site calibration service is available for this parameter, since on-site conditions are typically more variable than those in the laboratory, larger measurement uncertainties are expected on-site than what is reported on the accredited scope.
2. Range numbers in parenthesis represent scale resolution.
3. This scope is formatted as part of a single document including Certificate of Accreditation No. AC-1213.

Vice President
